SUMMER INTERNSHIP 2026 (01 JUNE - 31 JULY)

บริษัท ท่าอากาศยานไทย จำกัด (มหาชน)

ฝ่ายกลยุทธ์เทคโนโลยีและการสื่อสาร

01 COMPANY PROFILE: AIRPORTS OF THAILAND PUBLIC COMPANY LIMITED (AOT)

- **Industry: Aviation Infrastructure & Logistics**
- **Key Role: Thailand's leading airport developer and operator, managing 6 primary international hubs, including Suvarnabhumi (BKK) and Don Mueang (DMK).**
- **Ownership: 70% State-owned via the Thai Ministry of Finance | Listed on SET (AOT)**
- **Focus: Connecting global tourism, expanding passenger handling capabilities, and driving national transport infrastructure.**

02 RESPONSIBILITIES

- **EA App Development: Built a central EA Repository App using Power Apps & SharePoint backend.**
- **Workflow Automation: Configured Power Automate for daily automated reporting & activity alerts.**
- **EA Dashboards: Designed analytics screens tracking Portfolio, Security/GRC, and Infrastructure.**
- **System Testing: Debugged Power Fx formulas and optimized forms for corporate handover.**
- **Site Visit: Inspected Suvarnabhumi Airport operations to align app design with real workflows.**

03 LEARNING & ACHIEVEMENTS

💻 **Technical Skills**

- **Microsoft Power Platform**

Microsoft PowerApps

Power Automate

- **EA Data Visualization: Built multi-criteria dashboards for Application Portfolios & GRC compliance.**

🤝 **Soft Skills**

- **Technical Problem Solving: Systematically debugged logic errors and data connection bottlenecks.**
- **Stakeholder Collaboration: Communicated technical progress with department supervisors and mentors.**

04 CHALLENGES & REFLECTION

CHALLENGE ENCOUNTERED	HOW I SOLVED IT	KEY LESSON LEARNED
Data Recording & Formula Errors: Reconfigured data to complete and dattabsse to convent data recording and errors	Reconfigured data and rendered user-streamline to detect qualification and synthetic events in details.	**System Rigor:** logic to learn how formula integration detects errors and evaluating automation for data lists
Form State Management: Checkboxes failed to retain checkbox data notifications because of similar changes.	Binding default properties to individual values and logic to return current default automatically.	**Methodical Debugging:** Conclusion to systematic item management and evidence completion
Workflow Trigger Delays: Automated notifications did not fire, or sent a generic notification when they did not fire.	Corrected time zone offset values and added a generic trigger condition to the flow to enable robust notification delivery.	**Enterprise Integration**: conclusion: integration of enterprise integration matrix and project transport.

06 CONCLUSION

Memorable Experience

- **Team & Operations: supportive colleagues and Suvarnabhumi Airport visit.**

Future Impact

- **Academic: Mastered Power Platform architecture to strengthen future technical studies.**
- **Career: Built practical skills in system design, debugging, and team collaboration.**

- **Prepared By: Chanoudom Tann 6610755487**
